Following HAP purification, this DNA was used as tracer is a subtractive hybridization reaction. The fiver was PCR-amplified cDNAs from pools of 5.0% clones made from the same 5 libraries. The pools consisted of the following libraries and clonebus: Soares NBMSF pro. i. 309384-310919, 323208-325895 Soares NBMSF pro. i. 145032-147335, 147720-148103, 148872 14725, i5002 - 150407, 15115-15232 Soares NBMSF pro. ii. 304776-15232 Soares NBMSF pro. ii. 304776-306311, 320136-322823, 326280 states NBMS pro. ii. 758280-760513, 773084-74407 Soares NBMS pro. ii. 304776-306311, 320136-322823, 326280 states of the following soares and M. Fatima Bosaldo." 739080-74095 Surfraction by Hento Soares and M. Fatima Bosaldo."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Unpublished (1997)

Anote—Vector: PITT3D-Pac (Pharmacia) with a modified polylinker; Site_1: Not I; Site_2: Eo RI; Plasmid DNA from the normalized library NcI_GAP_GC4 was prepared, and ss circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization of 5,000 clones made from the same library (cloneIDs 1557096-1258631, 1469064-1470983, and 1475592-1476743). Subtraction by Hento Soares and M. Fatima Bonaldo.

/ NO.1: GAP_ELO is a cDNA library containing the following
tissue(s): Chondrosarcoma. The library was constructed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
was prepared from a pool of 6 anonymous Wilms' tumor RNAs. FNA was prepared by acid-phenol, followed by one round of oligo dr selection. CDNA library preparation was with the BRULLife Tech. Superscript Plasmid system. An oligo-dr Not1 primer for first strand synthesis generated agrocerce(t) at the 3' end of the clones. A 5' Sall adaptor was used with sequence 5'-grogaccacycgroga? Resulting cDNAs were size selected (average size 2 kb), Not1 dispested, and ligated into Not1/Sall-cut pspokt1. Library was constructed by Dr. Manfred Gessier.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      stranded CDNA was ligated to an ECOR I adaptor, digested with Not I, and cloned directionally into pT773-pac vector. The oligonucleotide used to prime the synthesis of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Email: cqqpbs:fmail.nbi.gov
